June 15, 2021

To Whom It May Concern:

Ref: Huntron's Quality System

In November 1997 we approved a Quality System that modeled ISO 9002. We worked on this program for a year with three other companies all of which were members of the American Electronics Association (AEA). The program was implemented across all company departments.

Also, in 1997 we started an OEM Agreement with Tektronix where we co-labeled a Huntron Tracker for their TDS 220 Scope. Tektronix sent two auditors to our facility to audit our processes before allowing our partnership to continue. Huntron passed and has received high praises from Tektronix.

Huntron has for years provided COTS products to the US Armed Forces, including products sold to the Navy, Marines, Air Force, Army, and Coast Guard. We have had contracts since the mid 80's and contracts for providing products that are part of the Navy Gold Disk Program, <http://www.huntron.com/sales-support/dod2.htm> .

Our products are also listed for sale through GSA (General Services Administration) serving all segments of the government market place, <http://www.huntron.com/sales-support/dod3.htm> .

We have several sub-prime contractors as customers including PIDESO, Lockheed Martin, Northrop Grumman, Raytheon, Boeing, Aeroflex, DRS, and DME. Some of them have added our products for use with theirs.

Although we do not have the ISO Certificate, we have 44+ years of experience of producing reliable products, we model ISO 9002, and have a great reputation for quality and service before and after the sale.

Respectfully submitted,

**Alan Howard**
